SITESCAN SERIES
500S & D-50
GENERAL PURPOSE BROADBAND DIGITAL ULTRASONIC FLAW DETECTORS

Simplicity | Capability | Reliability
Sitecan Series
The choice is yours, customise your software.....

The Sonatest heritage in product design and Sitecan name has always assured the technician of robust instrument construction combined with exceptional performance. The Sitecan series carries the baton of all these desirable features, but now, thanks to innovative internal redesign, new features can be added and upgrades performed in the working environment, reducing down-time and increasing working flexibility. High levels of near surface resolution, penetrating power and excellent signal to noise ratio are key functions in the Sitecan range. Typical applications are Weld Fabrication, Corrosion Detection, Forgings & Castings and general UT inspection.

Sitecan Series Features
• Customizable & Intuitive Menus
• Split DAC/AVG
• Angle Measurement Mode.
• Configurable on-board software.
• Field Upgradable.
• Encoded B-Scan
• A-Scan Fade.
• 4GByte on-board memory.
• USB Interface for PC import/export.
• Video Output for training.

High Visibility Display
For any flaw detector the display is a crucial element. The Sitecan series has a color transflective VGA display, providing high visibility in any lighting conditions. Maximum readability is achieved through adjustable brightness and the choice of 9 color palettes, including a black-on-white LCD emulation mode. Simplicity reigns with the enhanced user interface and a full screen A-scan display is available at the touch of a button, so that every detail of the A-scan can be easily seen.

3Rs - Reliable, Rugged & Robust
The ability to perform in harsh environments with proven reliability is an important aspect of flaw detector ownership. Maximum operational time is promoted by outstanding battery performance, up to 16 hours from full charge for Sitecan and 12 hours for D-50. The Sitecan’s enclosure is constructed using automotive grade impact resistant materials and is designed to meet IP67 standards, offering excellent water resistance. Explosive Testing MIL810-G standards have been passed, together with environmental testing which has confirmed the instrument fully functioning at temperatures above 55°C.

Sitecan D-50
DAC Curve functionality shown in Full Screen Mode.

........and choose your hardware.

Sitecan 500S  TCG  Mode
Features

B-Scan
The Corrosion Software option includes the B-Scan display function which shows the cross section of the material based on its wall thickness. The B-Scan has selected update rates from 3 to 10 times per second, and can be stored with the thickness readings and transferred to the PC via UTLity.

AWS
With this option enabled, measurements of Indication Level (IL), Attenuation Factor (AF), and Indication Rating (IR) are calculated and displayed in accordance with AWS D1.1

DGS (AVG)
AVG/DGS software can be configured for any transducer and gives repeatable sizing of flaws with direct readout of Equivalent Reflector Size. The visible ERS curve can be adjusted to display the desired acceptance level and used to trigger the alarm and measurement reading.

Angle Measurement Mode
Quick accurate measurement of beam profile is made easy by the new angle measurement mode. The instrument automatically converts the indication from a side-drilled hole of known diameter and depth to the angle of the reflector from the beam exit point. Using the built-in peak-detection mode, as shown, the beam profile for any transducer can be confirmed in moments.

UTLity / UTLity Pro (Data Management Software)
UTLity software provides everything you need to manage your inspection data. The Standard version is FREE with every instrument and gives you the ability to view, move and manage Calibrations, A-Scans, B-Scans and Thickness Logs both on the instrument and on your PC. With UTLity you can also create customized inspection report templates, cut and paste information to other applications, and create printable pdf documents.

• Load, store, manage files both on the PC and on a connected flaw detector
• Save, analyze, color code & export Thickness logging data to spreadsheets/asset management software.
• Update the Flaw Detector Software & Firmware as and when updates become available on our website.

UTLity Pro is the “professional” version and works in conjunction with the Corrosion Software option, providing the end user with the ability to create and manage inspection plans, location notes, historical thickness readings and other asset management information as required.

• Set up Inspection plan (grid) templates, notes and labels.
• Import previous readings into an inspection plan
• Export Inspection plan data to spreadsheets and plant maintenance databases.
DAC
Up to 20 reference points can be used to construct a
digital DAC curve. The user can choose whether the
DAC curve or Gate 1 is used as the monitoring level.
Echo amplitude can be displayed as either dB DAC, %
DAC, or % Full Screen Height.

Library of DAC Curves
There are pre-programmed dB levels corresponding to
· EN (-6dB, -14dB)
· ASME (-2dB, -6dB, -10dB)
· JIS DAC (+6dB, -6dB, -12dB)
Any of the available levels can be used as monitor
gate. The level selected for monitoring is highlighted in
a different color to the other curves on screen.

Customizable DAC
Up to 3 custom curves can be used in addition to the
pre-programmed library. The user can enter custom
levels between +/- 20dB for each of the 3 curves. In
this way, all international Standards are supported.

Dynamic DAC
The wide dynamic DAC range can be used for better
measurement resolution of distant echoes. The height of
the DAC curves can be adjusted using the Reference Gain
control. The relationship between DAC curve and reference
indications is preserved throughout and the additional
T-loss control manages transfer loss from test-block to
specimen.

DAC to TCG
A DAC curve can be converted to a TCG curve, and
back again. The conversion uses the reference points
already collected and preserves the reference gain for
the left-most reference point, so that all reference
echoes are set to 80% FSH.

PLUS! In case your Sonatest flaw detector ever needs a
software update, UTility can collect the latest version
over the internet and upgrade your Flaw detector
without ever having to return it to a service centre.
SITESCAN Series D-50 & 500S

Specifications (subject to change without notice)

Test Range: 1mm (0.4 in) to 10,000mm (394 in)
Velocity: 1000 - 10,000 m/s continuously variable.
Probe Zero: 0 to 1000 µm
Delay: 0-10,000m (400in) in steel at 5930m/s (19455fps)
Gain: 0 to 110dB adjustable in 0.5, 1, 2, 6, 10, 14 and 20dB steps.
Test Modes: Pulse echo and transmit/receive.
Pulser: 200V fixed. 50mS square wave.
Damping: 50 and 400 Ohm damping selectable.
P.R.F.: Adjustable 5Hz to 1kHz. External sync also available.
Screen Update Rate: 60Hz
Rectification: RF, Full wave, ±ve half-wave and ±ve half-wave.
Frequency Range: 1MHz to 1MHz (-3db)
System Linearity: Vertical = 0.5% Full Screen Height (FSH). Horizontal ±0.2% Trace Full Screen Width (FSW).
Reject (Selective): Up to 80% Linear reject or Up to 50% Suppressive reject
Or: Removes baseline noise without affecting indication amplitude
Or: (increase zero offset and reduces amplitude of all echoes) LED Warning when active.
Units: Metric (mm), Imperial (in)
Display: Color Transflective VGA (640 x 480) TFT
A-Scan Area: 400 x 510 pixels (normal), 460 x 620 (FS).
Display Area: 116.16 x 87.2 mm (4.57 x 3.43 in).
Gate Monitor: Two independent gates for measurement and monitoring. Start and width fully adjustable over the entire range of the instrument. Levels adjustable from 0% to 100%, positive or negative triggering on each gate with audible & visual alarms. Gate resolution is 5nS.
Zoom: Expands range and delay to cover the area set by Gate 1 start & width controls.
AGC: Automatic Gain Control automatically sets the signal in Gate 1 to a level between 10% and 90% FSH, tolerance between 5% and 20%.
Measurement Modes:
Mode 1: Signal monitor. Gate alarms can be active but no measurements are displayed.
Mode 2: Depth and amplitude of first signal in gate.
Mode 3: Echo-Echo distance measurements.
Mode 4: Trigonometric display of beam-path, surface distance (including X-offset) and depth of indication from the inspection surface together with echo amplitude. Curved surface correction can be applied for convex and concave surfaces. Half-skip can be indicated on screen.
Mode 5: Gate to Gate distance measurement.
Mode 6: Flank to Flank
Mode 7: Beam Angle, calculated from beampath, hole radius and hole centre depth.

Measurement Display:
Live display and updates on screen at 10 times per second.
Large display of a single measurement available.

Waveform Smoothing Select from:
0) None (both min and max values are displayed in the A-Scan)
ii) Fill (Min values set to baseline value, produces a solid A-Scan)
iii) Smooth (min values ignored, produces a clear outline
Reference Waveform: Displays a previously stored A-log in a color different from the active display: enabling a quick visual check of the differences.
Clock: Built in; battery-backed RTC keeps time and date.
Internal Memory: 4GB storage available for A-scans, panels, T-logs, B-logs etc.
Active Peak Memory: Retains all A-scans on screen for echo-dynamic pattern analysis, with the active A-scan displayed in a separate color.
Notes: Alphanumeric labelling for panel stores, A-logs, B-logs etc.
Display Freeze: Hold the current waveform on screen for off-line processing.
Help Key: Shows software and hardware information.
Language Support: Multiple languages are selectable from a list including: English, French, Spanish, Russian, Chinese (Modern).
Others are available on request.
Encoder Connection: Lemo min 4-pin connector (D50)
D-Sub 16 connector (500S)
Video Output: Standard on 500S. Factory Option on D-50.
Proportional Outputs: Available on 500S.
External Sync: Available on 500S.
USB Connection: Internal storage shown as Memory Device.
Transducer Sockets: BNC or LEMO (factory option).
Charger: 100-240 VAC, 50-60 Hz.
Environmental: Case sealed to IP67
Temperature: Operating ~10°C to 55°C (14°F - 122°F).
Storage: ~40°C to 75°C (~40°F - 167°F).
Size: D-50: H 172mm x W 238mm x D 70mm (6.77in x 9.37in x 2.75in).
500S: H455mm x W 255mm x D 145mm (17.91in x 10 in x 5.71in).
Weight: Sitemscan D-50: 17 kg (37lbs) with battery.
Sitemscan 500S: 25kg (55lbs) with battery.
Warranty: 2 year
Extended Warranty: Sonacover – extended 5 year warranty, including 4 calibrations.
Standards: Vibration to 5455-5 Proce 1 Annex C Fig 6
Shock: 5965 Proce 1 Fig6/6ms
Explosive atmospheres – MIL-STD 810G
Methods 5115, Procedure 1

### Sizing Techniques & Software Options

<table>
<thead>
<tr>
<th>Sizing Technique</th>
<th>Description</th>
<th>Standard or Optional</th>
</tr>
</thead>
<tbody>
<tr>
<td>DAC</td>
<td>Defined by up to 20 reference points or converted from TCG curve and digitally drawn on the screen. DAC curves meet the requirements of EN, ASME, JIS and many other standards. Custom DAC curves can be selected. DAC dynamic range can be extended by automatically adjusting the reference curve to match the reference gain. Scanning Gain and T-Loss available as separate controls. Amplitude readout is selectable between %FSH, % DAC or relative dB.</td>
<td>Standard</td>
</tr>
<tr>
<td>TCG</td>
<td>Time corrected or &quot;Swept&quot; gain, defined by up to 10 reference points or converted from a DAC curve. All points converted to 80% screen height.</td>
<td>Option</td>
</tr>
<tr>
<td>Backwall Echo (BEA)</td>
<td>0-40dB attenuation applied to the latter part of the time base, to improve the detectability of defects near the back wall and the loss of BWE due to porosity.</td>
<td>Option (requires TCG)</td>
</tr>
<tr>
<td>AWS</td>
<td>Built-in calculation and display of factors and parameters required by AWS D11</td>
<td>Option</td>
</tr>
<tr>
<td>AVG/DGS</td>
<td>Enables the calculation of pseudo &quot;DAC&quot; curve and equivalent reflector size of UT indications, based on user input of transducer parameters.</td>
<td>Option</td>
</tr>
<tr>
<td>API</td>
<td>On-board flaw sizing method in accordance with API SUE.</td>
<td>Option</td>
</tr>
<tr>
<td>Interface Trigger</td>
<td>Unlocks the interface trigger gate controls, which hold off the A-Scan acquisition and display until an interface echo is detected within a specific range and amplitude. Used for the elimination of water-path.</td>
<td>Option</td>
</tr>
<tr>
<td>Corrosion/B-Scan</td>
<td>Enables complex inspection plans to be uploaded from a PC using the on board Utility software. Features include 2 dimensional thickness logging, storing A-Logs and B-Logs with thickness values, taking multiple readings per location and note creation for each grid location. B-Scan option available to display bar-graph views of thickness readings taken by Gate 1 against distance or time.</td>
<td>Option (includes B-Scan)</td>
</tr>
<tr>
<td>Split DAC &amp; DGS/AVG</td>
<td>Adds up to 3 zones of added gain (+12dB, +24dB) to the DAC or DGS/AVG curve to enable single-pass scanning of large sections and attenuative materials. Conforms to EN583-2:2001.</td>
<td>Option</td>
</tr>

### Sitescan Standard Kit

- Sitescan 500S or D-50 Digital Flaw Detector
- Battery, Charger, charger mains cable.
- Certificate of Conformance
- Carry Bag.
- UTILITY & USB cable.
- Display Window Cover.
- Ultrasonic Couplant.

### Site Pack Option (D-50 only)

- Sitescan Standard Kit
- Rugged Shipping Case
- Airplane carry on size 488 mm x 386 mm x 229mm
- 19.2 in x 15.2 in x 9.0 in
- Centre of Gravity Bracket
- Webbing Bracket
- Magnetic Bracket
- Webbing/two Karabiners strap/hook

### Rubber Boot Accessory

Customised Rubber "shell" that fits around the instrument for extra protection and insulation. (D-50 only)

### UTILITY Pro (Advanced User Software)

Advanced user software, partners with the Corrosion Software Option enhancing data manipulation, presentation and analysis.
