

Introducing: CREO Modula

Creo Modula is a multi-purpose modular scanner capable of scanning 1" to 3" studs and surface scanning circumference up to 400mm diameter. The modular design allows the scanner to be re-configured with various probe holders, switchable magnet, and face scanning arm.

Design Prototyping Manufacture

The unique design incorporates a direct drive to the encoder meaning the scan can be completed with zero chance of encoder slip. Locational accuracy is achieved by cam linked mounting legs keeping the probe in the centre of the stud. Creo Modula is adaptable to cover a range of varying inspections, custom designed attachments are also available on request.
